12:30-3:00—Afternoon Session

Engaging At Risk Learners

This interactive workshop identifies qualities of at-risk learners pairing those qualities with strategies to offer insight into teaching to the strengths of each child. Participating teachers will leave with immediately applicable techniques to add to their regular lessons.

Incorporating Web 2.0 into the Classroom

Web 2.0 is for information sharing, interoperability, user-centered design, and collaboration on the Internet or World Wide Web. Examples of Web 2.0 include social networking sites, blogs, wikis, video sharing sites, hosted services and web applications.

Introduction to Interactive Whiteboards

Participants will learn all the basics of the interactive whiteboard software. Participants will receive hands-on experience with this dynamic software. Participants attending this workshop will gain enough proficiency to move on to other more advanced classes.

Google Apps in the Classroom

Participants will learn how to use Google Apps effectively in the classroom. Google Docs, Google Chat, Google Forms, Google Sites, and other tools empower the teacher to reach new levels of effectiveness and collaboration. Participants will explore each tool and leave with concrete ways to integrate their use into the classroom.

The Brain and Learning

This workshop will deal with research-based principles of learning. Classroom examples, activities, and organizers will assist educators in planning lessons and developing assessments. We will discuss learning styles and I will offer practical ways to provide for all students' learning styles. The workshop will integrate movement, visual prompts, and social interaction that spark the brain!

21st Century Teaching and Learning

This exciting workshop introduces 21st century strategies to provide instruction using a variety of technologies that support many learning styles. All students have a unique combination of strengths related to learning. Learn how to easily address many modalities while customizing your instruction to meet your students' needs. You'll work collaboratively with other educators to learn practical strategies that you can apply in your classroom immediately.

HAZCOM (formerly Right to Know)

"Right to know", in the context of United States workplace and community environmental law, is the legal principle that the individual has the right to know the chemicals to which they may be exposed in their daily living. It is embodied in federal law in the United States as well as in local laws in several states. This workshop will provide you with the knowledge you need to be safe in your work environment.

Lab Safety

An important part of any science course is experience working in the laboratory. This is where you will learn to put the scientific method into practice and learn hands on skills that are important in the day to day work of any scientist. All science labs are potentially dangerous. However, risks to your health and safety can be minimized if you follow the common sense rules in this workshop.
